

The 4000-7 is easily adaptable to most small top head drive rigs with rig tables that are connected to the rig's mast and using a maximum of 6-3/4" bit. The 4000-7 is supplied with Universal Mounting Brackets that must be affixed to the underside of the table.

The 4000-7 Pneumatic Diverter System is manufactured with a 9 tube pneumatic assembly and in most cases has sufficient enough extension to work properly against the ground. If more extension is required, the brackets can be changed to the 4000-7S style brackets to enable unit to be elongated far enough for the pneumatic section to contact the ground and seal.

The 4" NPT Flow Line can be manually rotated 360° to direct drill cuttings to desired location. The 4000-7 can be utilized on terrain that is up to 20° out of level.

This unit furnished complete with Control Unit, Primary Inline Air Regulator, Air Lines and Mounting Brackets. Optional Casing Flange is available and should be used after casing is set, however, it is not necessary. Also can be fitted with 5 tube pneumatic assembly.

The Diverter System uses the patented two-piece stripper rubber which was designed exclusively for Divertech.
